Instructions

Step 1: Recommended to use your original choice from the Atari Case Study, but if it's just black and white a different retro game of your choice may be picked (preferably first-generation systems or older).

- For reference, here are the links from the prior assignment:

- https://www.free80sarcade.com/all2600games.php
- https://games.aarp.org/category/atari-games
- https://playclassic.games/games/action-atari-2600-games-online/keystone-kapers/play/
- https://www.tripletsandus.com/play-classic-80s-arcade-games/play-atari-2600-video-games/

Step 2: Analyze the color/design further and come up with a modernized sketch/outline/etc per the below tasks. I understand not everyone is an artist (neither am I) hence the goal of these are sketches, but you're free to be more elaborate.

Step 3: Save the worksheet. Export the PDF. Upload it to GitHub. Upload the PDF to Canvas.

Section #1: (2 pts.) Exploratory Analysis Of Original Game

Progress: 91%

Task #1 (0.67 pts.) - Color Schemes Identification

Progress: 75%

Details:
Include relevant screenshots of the game. You don't need to go crazy with this but do capture the essence.

Task #2 (0.67 pts.) - Analyze how these colors contribute to the game's atmosphere

Progress: 100%

Your Response:

I feel that the pink/red color scheme fails to enhance the game's atmosphere. Those colors lack fear or drama. The soft pinktones create an almost pastel, gentle appearance that completely undermines any sense of danger or urgency. for the purple color scheme it a bit better. The purple and white contrast creates more visual separation between elements than the pink version The separation of the tiles in the purple platforms make the ladders are easier to distinguish.

Saved: 2/23/2026 8:08:00 PM

Task #3 (0.67 pts.) - Compare with a modern equivalent

Progress: 100%

Details:

- Mention the comparison game (can be more than one game)
- Compare the use of color to the modern game and highlight how color usage

evolved (or devolved)

Your Response:

the modern king kong game thats on mobile has a lush jungle environment with vibrant greens and a atmospheric fog. The lighting is also misty with god rays that give off a moody ambiance. the biggest thing here though is that with this atmosphere theres a Sense of place clearly Skull Island.

Section #2: (2 pts.) Creative Conceptualization For Redesign

Progress: 100%

Task #1 (1 pt.) - Modern Mood/Theme Proposal via Color

Progress: 100%

Details:

- Propose a revised mood or theme for the game, justified with a new color scheme
- Explain your choice of colors using color harmony rules (e.g., analogous, complementary)

Your Response:

To better create actual tension, the game should adopt a sort of dusk post-apocalyptic theme(sort of like last of us) with a color scheme of deep orange platforms against dark blue backgrounds, which act like a dramatic twilight sky during Kong's Empire State rampage.

Saved: 2/23/2026 8:26:29 PM

Task #2 (1 pt.) - Narrative Enhancement Through Color

Progress: 100%

Details:

- Explain how color can be used to enhance storytelling within the game (this may be a stretch in some cases, but answer it the best you can)
- Provide examples/descriptions that illustrate your narrative color choices

Your Response:

Color is a huge storytelling tool in games by establishing emotional context. Other than the story being amazing, The Last of Us is my favorite game of all time because of how the environment was created and stuck with me emotionally. In King Kong, color redesign could tell the story of an increasingly desperate climb. starting with cooler, safer blue-gray tones at ground level, transitioning through warm oranges and ambers in the middle sections (the dangerous climb as sunset approaches and Kong grows more agitated), and culminating in intense reds and deep purples at the top where Kong resides. This color progression would create a visual "hero's journey" where players literally climb from cool safety into warm peril, making each successful level feel like narrative progression rather than repetitiveness

Section #3: (2 pts.) Design Sketching And Color Application

Progress: 87%

Task #1 (1 pt.) - Gameplay Mechanics and Color Integration

Progress: 75%

Details:

- Sketch gameplay elements or mechanics enhanced by your new color scheme (excludes interface as it's a different question/task)
- Provide concept art that showcases the updated visual style
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

Task #2 (1 pt.) - Explain the choices of your sketches

Progress: 100%

Details:

- Describe how these color choices affect player interaction and engagement
- Explain the rationale behind each color choice and its expected impact

Your Response:

The orange/blue color scheme creates immediate visual tension that pulls players into the game oranges trigger associations with danger and urgency while blues evoke heights and the sky, making every climb feel risky rather than abstract. The vertical color progression from cool blues to hot oranges transforms repetitive climbing into a narrative journey where players viscerally feel stakes rising with each level, combating the original's fatal monotony by making visual variety communicate gameplay escalation. For the Character's color; the cyan player contrasts the warm enviroment creating visual isolation that makes players feel increasingly vulnerable as they ascend, while yellow Ann serves as a bright beacon of hope that draws the eye and justifies the struggle.

Saved: 2/23/2026 9:06:50 PM

Section #4: (2 pts.) Audiovisual Reimagining And Ui/ux Modernization

Progress: 91%

Task #1 (0.67 pts.) - Complementary Sound Design

Progress: 100%

Details:

- Briefly outline how sound design complements the visual color scheme
- Mention if specific audio cues align with color changes or themes (use details)

Your Response:

The sound design would mirror the color progression by starting with lower and slow tempo music in the cool blue ground levels, then shifting to higher/faster tempo music as platforms transition through orange to red creating tension. red bombs could emit a high pitched "sizzle" sound while the player crossing from blue platforms to warm orange ones could trigger a tone shift in the background music.

Task #2 (0.67 pts.) - UI/UX Color Scheme

Progress: 75%

Details:

- Sketch UI/UX elements highlighting the integration of your new color scheme
- If using physical sketches, can use a scanner or phone photo to capture. It's recommended to also add the original to github as this upload process may not do the original work(s) justice.

Task #3 (0.67 pts.) - UI/UX Color Functionality

Progress: 100%

Details:
Detail how color enhances usability, player feedback, and overall aesthetic. Include considerations for accessibility.

Your Response:

The complementary orange blue color scheme with high contrast yellow UI elements creates immediate visual hierarchy where threats, the red bombs, objectives,yellow ana, and identity blue player are instantly distinguishable. However, this design would need accessibility improvements for colorblind players maybe like adding distinct shapes or patterns to bombs.

Saved: 2/23/2026 9:55:33 PM

Section #5: (2 pts.) Reflection

Progress: 100%

Task #1 (1 pt.) - Reflection on Color Theory in Game Design

Progress: 100%

Details:

- Reflect on how the application of color theory principles can transform the player experience
- Discuss challenges faced in applying color theory to a classic game

Your Response:

Applying complementary color harmony and vertical gradient progression transforms King Kong from an emotionally flat, visually confusing experience into a psychologically engaging narrative journey where players subconsciously understand danger levels, character relationships, and spatial progression through color alone.

Saved: 2/23/2026 10:00:53 PM

Task #2 (1 pt.) - Personal Learning Experience

Progress: 100%

Details:

- Share insights gained from this assignment, particularly in relation to color's impact on game aesthetics and mood
- Evaluate the effectiveness of your redesign choices based on color theory

Your Response:

i learned that color can actually mean a lot to a player. I also learned one of my favorite themes that is like dark and nostalgic. themes that games like last of us and little nightmares use.
